Order Your Bulbs Early

Shipment can be made at any desired time, but it will insure you against disappointment if the order is booked while stocks are complete. The same may be said of plants
FASCINATING as flower gardens in general are, we'll all agree that none can possess half the interest attaching to one of our very own, whether its dimensions be generous or microscopic. Quite as interesting as having the garden is deciding what to put in it, and this little booklet is intended first of all as a list of desirable things, easily grown and readily responsive to ordinary care—though many of my offerings are in themselves quite out of the ordinary.

The bulbs and plants offered are neither over-fertilized nor over-watered, but produced under naturally favorable conditions of soil and climate, full of vigor, and prepared to make good in YOUR garden if given half a chance.

GLADIOLI

The name and modest fame of my Farm have both come from my specialty, the gladiolus, originally the sole offering. And even now, with perennials and irises and peonies clamoring for their share of admiration (and getting it) the "glad" stands first in my regard and that of many of my customers as well.

May I tell you why?

It's so easy to grow, so sure to bloom, so entirely at home in just the usual garden soil and environment, so quick to appreciate any extra attention, so easily moved from one spot to another in the yearly re-arrangement of the garden for greater effectiveness, so thoroughly satisfactory as a cut flower. And it gives its full effect the first season, a feature of particular value for new grounds.

COLORS COMPETE WITH THE RAINBOW

To reproduce the wonderful coloring of modern gladioli would bankrupt an artist's palette. Ranging, as they do, from white thru an infinity of pink and rose shades, lovely yellows and soft blues, scarlet and rich crimson, harmonious tones can be chosen.
to fit any garden picture, or to blend with any indoor color scheme.

The beauty of many flowers is enhanced by throat blotches of vivid contrasting color.

JUST A FEW CULTURAL SUGGESTIONS

If you want gladioli from early July until frost, set part of your bulbs when the earliest vegetable gardens in your neighborhood are being prepared, then more every two weeks until the first of June.

Give them the sunniest spot in your garden, a moderately rich soil if convenient, but avoid manure recently applied, as all bulbs resent that. Bone meal is excellent. Four to six inches apart in the row, the rows a foot apart, the bulbs five or six inches deep, is about right. Keep well cultivated and water when ground is dry.

CUTTING THE FLOWERS AND HARVESTING THE BULBS

If you cut the flowers, leave three or four blades of foliage to properly mature the bulb. In the fall, after a killing frost, lift the bulbs and dry them in a shady, airy place, cut off the stalks close to the bulbs, twist off the old withered roots, then store the bulbs in open trays or boxes in a cool corner of your basement or elsewhere. Of course they must not freeze.

TWO GARDENS INSTEAD OF ONE

If your gladioli as seen from the street or house are particularly fine, I’m sure you will not want to spoil the effect by picking the flowers before they fade. Why not have a few straight rows of “glads” planted in the back yard, to serve as cutting material? Do you know the blooms will carry at least five hundred miles by express, with assurance that they will give a full week’s pleasure to the recipient?

ARRANGING THE BLOOMS

Vases of clear glass seem especially good with flowers of delicate tint; often gladioli of richer and more decided color will be enhanced by pottery reflecting the same tones. Nothing permits more graceful arrangement than baskets of moderate size, preferably those with handles. Low bowls, utilizing extra heavy glass frogs to hold the flowers in position, never fail to bring compliments. These heavy frogs, only recently imported from Europe, can be obtained for customers when desired.

But it’s time to list the splendid sorts which I offer this year. These have been selected as most desirable, from some four hundred varieties growing in my gardens. The newest and handsomest are, of course, expensive — but they’re worth the price and, considering the pleasure they will give for years to come, are not an extravagance to the permitting purse.

Irices Germanica

No other hardy plant is getting quite so much attention nowadays as the iris, and if you have seen an iris-bordered path in June, flaunting its regal purple and delicate lavender and rich bronze in the spring sunshine, or have had the privilege of viewing a collection which included some of the magnificent new introductions from France and England and our own American originators, you will admit there is ample reason.

Irices increase rapidly and soon form handsome clumps. They are transplanted in early spring or early fall with equal certainty of thriving in their new locations, but fall planting gives greater assurance of flowers the first season. The roots should not be set too deep—a couple of inches of soil to cover is sufficient. They require good drainage and prefer full sunshine. Manure is particularly distasteful to them and often fatal, but bone-meal and air-slaked lime are excellent. June is the month of most prolific bloom.

The very word "Perennials" suggests old garden friends who come to greet us every year, after their brief vacation under winter's ice and snow. And each year they are more welcome. My gardens contain a number of unusual plants of this class, many grown from the finest European seed obtainable, and varying so greatly in habit, height and flower that it is an easy matter to find plants appropriate to any desired part of bed or garden. Descriptions are necessarily brief, but it will be a pleasure for me to answer questions concerning any particular plant. Please order early as possible, as they should be set in very early spring for best results.

PLANTS FOR THE ROCKERY

Several plants described in the perennial list are well adapted to the rockery (though they thrive equally well in the garden), so I will mention them:

Iberis Tenoreana and Gilbraltica, phlox sublata, heuchera, saxifrage umbrosa and megesa, purple viola, dianthus deltoides, aster sub-eoeiulescens, saponaria oeymoides, alyssum saxatile and luteum, armeria.

SUMMER BEDDING PLANTS — Ready about May 1st

Only two popular plants are offered this year, but they are worth planting liberally:

KELWAY'S DELIGHT OF THE WEST ASTER — A beautiful rose pink, large flowered and with a long cutting stem for each flower. I have never grown anything finer. From imported seed.

KELWAY'S GIANT FLOWERED ZINNIAS — Including the soft new rose shades, dull bronze and other handsome colors.

SEEDS

BRONZE SUNFLOWER — Easily grown annual. Single sunflowers which exhibit velvety bronze and crimson on a background of gold, like immense gaillardias.

ENGLISH DOUBLE LARKSPURS — Mixed colors. These are very handsome annuals, equally admired in garden or vase. The colors always harmonize.

REMARKS

If you have friends interested in gardening and are inclined to send their addresses, I shall be most appreciative.
